Summary

Senior Platform Engineer and Developer Experience lead with 6 years building Kubernetes platforms, GitOps delivery, and internal developer platforms. Led a team of 3 at Studocu on AI platform and DevEx roadmap. Four years at Weave HQ, promoted to Senior Software Engineer. Shipped GitOps on AWS EKS, Backstage IDP, 250 deploys/day ephemeral environments, and sub-60s deployment pipelines.

Experience

Senior Software Engineer (AI Platform)

Nov 2025 – Present

Studocu

Amsterdam, The Netherlands

- Leading a team of 3: driving technical roadmap, mentoring engineers, and setting architecture direction for developer experience solutions across product and AI teams, influencing org-wide engineering standards.
- Built an AI-powered self-service developer platform using Claude and Cursor, cutting service bootstrap time from hours to under 2 minutes via a guided intake questionnaire for both technical and non-technical stakeholders, improving DORA metrics including deployment frequency and lead time for changes.
- Architected a dynamic, ArgoCD-based ephemeral environment deployer, scaling from 50 deployments/week to 250 deployments/day across developer and agent-driven workloads, eliminating manual environment setup and shortening developer feedback loops.
- Implemented a GitOps-based delivery platform using GitHub Actions, ArgoCD, Helm, and Crossplane to provision infrastructure and deploy 10+ services across AWS EKS regions.
- Built an OpenTelemetry layer on the same GitOps platform for unified traces, metrics, and deploy-to-runtime visibility across EKS services.
- Hosted and operated LangGraph and led the LiteLLM to Bifrost gateway migration, managing AI-related workloads spanning documentation services and Kubernetes-based management of platform services powering org-wide AI adoption.

Senior Software Engineer (Developer Experience)

Apr 2024 – Oct 2025

Weave HQ

Remote, India

- Promoted to Senior Software Engineer for technical leadership on developer experience and platform infrastructure.
- Developed CLI tooling for canary deployments using Prometheus metrics to gate rollouts on service health.
- Accelerated Git-based deployment pipeline, reducing deploy time to under 60s across the engineering org.
- Built an internal developer platform on Backstage for self-service service catalogs, docs, and scaffolding templates.
- Integrated MCP into internal CLI tooling and managed MLOps workloads for model and tool access across teams.
- Contributed to hiring, mentoring, onboarding, and developer collaboration through documentation and advocacy.

Software Engineer (Developer Experience)

Aug 2021 – Mar 2024

Weave HQ

Remote, India

- Drove measurable reliability and latency improvements on core developer infrastructure across the Platform and Developer Experience teams.
- Designed and scaled the redeployer to auto-deploy 200+ apps/day, enabling teams to ship faster with confidence.
- Created a schema-to-API doc system using Swagger UI, integrating proto schema service for prod and dev environments.
- Maintained internal CLI (`bart`) with 10+ commands and `bart-api` to streamline engineer workflows and environment setup.
- Migrated to a new `protoc` generator, added multi-language support using `buf`, and released fully tested tooling.
- Cut apps-info latency from 20s to 4ms by implementing optimized cache logic after a burn-rate incident.
- Automated testing and CI pipelines with GitHub Actions for better feedback loops and resilient service delivery.
- Led development of internal audit query tooling (Phase 1), enabling secure and efficient investigation of user actions across systems.

Software Engineer I (Visual Intelligence)

Samsung Electronics

Jan 2021 – July 2021

Noida, India

- Part of the ACR team in Visual Intelligence working on automatic content and fingerprint recognition modules.
- Designed and deployed APIs for fingerprint recognition, handling 2M+ daily matches with 96% accuracy.
- Reduced API latency by 40% via intelligent caching, significantly improving user experience.
- Built monitoring tools to detect critical node performance issues such as memory leaks, disk overconsumption, and CPU spikes at a global scale.

Projects

Airlock

GitHub

Research project on AI release engineering for agents

Studies how to ship AI agents safely. Treats prompts, skills, MCP servers, and models as one releasable unit. Snapshots agent state, diffs behavior changes, maps blast radius, and runs policy checks before merge. Returns PASS, FAIL, or NEEDS APPROVAL when prompts, tools, or model config change in a pull request. Added statistical evals and a fail-closed GitHub Actions workflow so CI blocks risky agent changes.

go-calque

GitHub

Open source agent framework with pluggable middleware

Contributed to smoother multi-agent flows so teams can chain agents for longer tasks with less glue code. Extended middleware for retries, fallbacks, logging, and validation without changing core agent logic. Made agents and middleware easy to reorder or combine so developers can try new pipeline layouts quickly.

MCPJungle

GitHub

Open source registry and tooling for MCP servers

Improved how clients find, connect to, and talk with MCP servers across the plugin ecosystem. Upgraded CLI commands for registering servers, running health checks, and managing server lifecycle. Hardened tool execution paths so agent workflows fail clearly instead of hanging on bad server state.

snackytalky.com

Self-hosted personal blog, Go API and TypeScript frontend

Built and operated a full-stack blog on a home server with Docker, PostgreSQL, Cloudflare Tunnel, and custom deploy and backup scripts. Covers food, cooking, and travel content as a side project for end-to-end product and platform ownership.

Certifications

Certified Kubernetes Administrator (CKA), Linux Foundation
Platform Engineering Certified Practitioner

Education

National Institute Of Technology, Hamirpur

B.Tech in Computer Science and Engineering (GPA: 8.2/10)

Jul 2016 – Jun 2020

Himachal Pradesh, India

Skills

Focus	Platform Engineering, Developer Experience, Internal Developer Platforms, AI Platform
Languages	Go, Python, TypeScript, JavaScript, Java, C++
Cloud & Platform	Kubernetes, AWS, GCP, Azure, Docker, Helm, Crossplane, Terraform, Linux
Developer Platform	ArgoCD, GitOps, Backstage, CI/CD, GitHub Actions, CLI tooling
Distributed Systems	gRPC, REST, Microservices, Event-driven Systems, System Design
Observability	Prometheus, Grafana, OpenTelemetry
AI & Agents	LangGraph, MCP, LiteLLM, LLMOps, RAG, Agentic Systems
